

Talk to us

The backbone of Onlime's Business Communications is our Enterprise Voice Service. No matter whether we deliver your data connection over satellite, fibre or our managed DSL links, Onlime is there to provide business quality voice anywhere, no matter how remote, of premier quality and at highly competitive prices, and what's more, our services are backed by strict SLAs.

Onlime offers a comprehensive and fully flexible range of enterprise quality communications services and understands your critical need for reliable connectivity. We monitor, control and support 24 hours a day.

Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing, IM capability and even smart phone apps for users on the go. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 Network Operations Centre.

You can use as many or as few of the functions of the fully featured Onlime voice platform and you will have full access to the online account management portal including real time billing.

Some of the features included:

- Voicemail
- Call divert
- Conference Calling
- Inter-Enterprise short code dialling
- Call transfer
- Call waiting
- Follow me

Our solutions offer total flexibility to host the PBX on your site or at our NOC and you would have total freedom to add or delete users as required. You will not only have the benefit of great cost savings to fixed and mobile numbers locally or around the world, but all calls are free between your enterprise extensions. With an IP based telephone system you can have

extensions all over world, over fibre or satellite, in your office or on-board ship. We can develop a solution to suit you.

We can provide you with international telephones numbers (DIDs) so if you receive a lot of calls from one country, calls to you will be treated as local. We have DIDs from over 50 countries. We can also connect your PBX to the local phone company or the cellular operators, if they are available, so all your calls can go out from a single phone number.

If you already have your own IP-PBX but are not happy with the quality, we can provide the SIP trunks and work with you to migrate your users to the Onlime platform.

If your users have smartphones, Onlime will provide you with Apps for Apple, Android or Windows and they will be free to make calls, within your network/corporation, or use our IM software on the go.

If you need the hardware we can provide everything from the PBX to the IP Phones to suit your budget. The phones are delivered fully configured and ready to use and we will provide as much support as you need during installation and on-going operations. You will be able to login to your own account at our customer portal and view your full call history as well as the record of your payments.

We offer flexible packages with no fixed contract as we would rather you stayed with us because you wanted to and not because you had to.
