

## Drill into your communications services

In a high fixed cost industry, reliable and secure communication to head office and other facilities is crucial, allowing for informed and prompt decision-making. Increased government regulation has compounded the need for constant access to production, safety and other related data.

At Onlime we can provide reliable and fast access to real-time data for decision centres, which may be thousands of miles from production.

Onlime offers a comprehensive and fully flexible range of enterprise quality communications services for the Oil and Gas sector.

## VSAT Solutions

Invariably drilling and production sites are either offshore or in areas of low population and as a result often lack national communications infrastructure, particularly in the early days of set up and production. VSAT becomes the only practical option and Onlime can provide solutions for all phases of the oil and gas field development, whether it is iDirect® based mobile antennas or small fixed systems for the exploration and survey teams, which can be rapidly deployed and easily relocated, or larger SCPC installations required for the construction and production phases.

The VSAT will connect back to our teleport in Germany and then over the Internet to your corporate network, or we can provide secure dedicated circuits to your corporate network out of the teleport or one of our other European POPs. We can provide in-country satellite mesh networks linking several sites for voice and data, or a star configuration linking sites from our Teleport. Onlime delivers MPLS end-to-end over the satellite links, whether iDirect or SCPC, to ensure a high quality of service.

Satellite bandwidth is an expensive commodity and both TCP Acceleration and Caching of regularly used content are an excellent way to save resources.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

## Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide just Internet access or dedicated MPLS connectivity to your offices through our European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cables and can work with you to develop a fibre solution.

## Wireless

We supply, install and operate long-range and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments, as well as on rigs or barges. The wireless network can support everything from security cameras, perimeter fence sensors, access sensors, voice and other applications on smartphones, and all of the welfare connectivity.

## Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the exploration or production sites and to Head Office would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

## Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
