

Are the costs of your communications services building too?

The construction industry is booming in many areas of the world where rapid urbanisation and strong current and projected economic growth have created a need for new supplies of energy and water, new transportation facilities such as ports, railways and trunk roads, new industrial facilities, warehousing, office space and not least, housing.

Online offers a comprehensive and fully flexible range of enterprise quality communications services for the Construction Industry.

VSAT Solutions

Many of the areas where major infrastructure projects are being built have to wait for the national communications infrastructure to reach them. Onlime supplies the construction industry with immediate, cost effective and reliable satellite communications to ensure you can communicate with the outside world from day one. VSAT becomes the only practical option and Onlime can provide solutions for all phases of the construction projects, whether it is iDirect® based mobile antennas or small fixed systems for the survey and setup teams, which can be rapidly deployed and easily relocated, or larger SCPC installations required for the full construction phase.

The VSAT will connect back to our teleport in Germany and then over the Internet to your corporate network, or we can provide dedicated circuits to your corporate network out of our Teleport or one of our other European POPs. We can provide in-country satellite mesh networks linking several sites for voice and data, or a star configuration linking sites from our Teleport. Onlime delivers MPLS end-to-end over the satellite links, whether iDirect or SCPC, to ensure a high quality of service.

Satellite bandwidth is an expensive commodity and both TCP Acceleration and Caching of regularly used content are an excellent way to save resources.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide just Internet access or dedicated MPLS connectivity to your offices through its

European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cables and can work with you to develop a fibre solution.

Wireless

We supply, install and operate long-range and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments, and we have deployed numerous installations in some of the harshest environments. The wireless network can support everything from security cameras, perimeter fence sensors, access sensors, voice and other applications on smartphones, and all of the welfare connectivity.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the construction sites and to Head Office would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
