

## Who ad-ministers your communications services?

Over many years Online (previously CET Teleport) has been providing secure satellite data services to government agencies. The location of our Hameln Teleport means Online can provide huge geographic coverage so whether it is connecting remote facilities in even the most distant parts of the world or providing support to the management of in-country networks, Online has it covered.

Our own infrastructure, built to German Government standards, is secured through multiple power supplies, redundant fibre, CCTV, alarm systems and strict protocols for access by authorised personnel.

Online offers a comprehensive and fully flexible range of secure quality communications services for Governments worldwide.

## VSAT Solutions

Onlime currently supplies VSAT solutions to remote military camps, mobile teams with flyaway antennas in challenging environments, Government Ministries and embassies, as well as border control points in a variety of locations. We can supply you with immediate, secure, cost effective and reliable satellite communications to ensure you can communicate with the outside world from day one. VSAT often becomes the only practical option and Onlime can provide solutions for all aspects of Government communications.

We can deliver, install and support small iDirect® based mobile antennas for military, police or border patrol units or small fixed systems at border crossings or remote Government offices, or larger SCPC installations for main Government buildings to ensure backup to the national infrastructure.

The VSAT can connect directly back to your own in-country network or through our Teleport in Germany and then over secure dedicated circuits to your Government network out of the Teleport or from one of our other European POPs.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

## Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide just Internet access or dedicated MPLS secure or encrypted connectivity to your network through its European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cables and can work with you to develop a fibre solution.

## Wireless

We supply, install and operate long-range and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments, and we have deployed numerous installations in some of the harshest environments. The wireless network can support everything from security cameras, perimeter fence sensors, access sensors, voice and other applications on smartphones, and all of the welfare connectivity.

## Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the Government offices would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

## Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
