Hospitality Output

Can you accommodate improved communications?

Onlime recognises the critical role that voice, email and Internet communications play in the success of any hospitality business. Administration functions as well as booking and payment facilities all rely on constant and uncompromised access to quality Internet and is now demanded by hotel guests as part of the facilities offered by hotels of all levels.

Hotels in areas of poor Internet connectivity or even the most remote areas can now operate in the same way as those based in large cities with Onlime's satellite communication services.

Onlime offers a comprehensive and fully flexible range of enterprise quality communications services for the hospitality industry.

VSAT Solutions

Whether you are a small independent hotel, a remote game lodge or part of a large chain of hotels, the hospitality industry has become more and more reliant on quality Internet to improve its market presence, to improve efficiency of its operations and to satisfy its guests' ever more demanding access to the World Wide Web. Onlime delivers Internet to a wide range of hotels, from the luxury 5 star to the small guest house and we will select the most cost effective solution for your requirements, whether it is a small fixed iDirect[®] system or a larger SCPC installation for larger hotels, conference centres and resorts.

The VSAT will connect back to our teleport in Germany and then out to the Internet. If you need access to a centralised reservation or accounting system or you are part of a larger group, we can connect you directly to your corporate network, either over the Internet or over secure dedicated circuits out of our Teleport or one of our other European POPs for both voice and data.

Onlime delivers MPLS end-to-end over the satellite links, whether iDirect or SCPC, to ensure a high quality of service. At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide Internet access or dedicated MPLS connectivity to your offices through its European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cable and can work with you to develop a fibre solution. Even if your building or site is not directly connected to the fibre we can install wireless links to bridge the gap.

Wireless

We install and operate short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments and will design and install the ideal Wi-Fi system for your hotel complex. The wireless network can support everything from security cameras, perimeter fence sensors for parking, access sensors, voice and other applications on smartphones, and all of the guest connectivity.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the complex and between the complex and Head Office would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
