

Higher output from your communications services?

Manufacturers need to be in constant contact with their suppliers and their customers. Regardless if you are a small manufacturer serving a national market or a branch of a much larger group we understand reliable communications are crucial to your business.

Whether you need the Internet to search for new suppliers or to promote your products to a wider audience or just to communicate with your Head Office over a secure private network (VPN), Onlime can provide the right solution over satellite, over fibre and over wireless.

Onlime understands the need for reliable connectivity in modern manufacturing businesses and offers a comprehensive and fully flexible range of enterprise quality communications services.

VSAT Solutions

Onlime delivers Internet and data to a wide range of manufacturers, from cars to carpentry, and we will select the most cost effective solution for your requirements, whether it is a small fixed iDirect® system or an SCPC installation for larger manufacturing or assembly plants requiring higher data speeds.

The VSAT can connect back to our teleport in Germany and then out to the Internet, or if you are part of a larger group, we can connect you directly to your corporate network through dedicated circuits out of our Teleport or out of one of our other European POPs for both voice and data.

Onlime delivers MPLS end-to-end over the satellite links, whether iDirect or SCPC, to ensure a high quality of service.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide Internet access or dedicated MPLS connectivity to your offices through its European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cable and can work with you to develop a fibre solution. Even if your building or site is not directly connected to the fibre we can install wireless links to bridge the gap.

Wireless

We install and operate long and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments and will design and install the ideal solution for your complex. The wireless network

can support everything from security cameras, intrusion detection, perimeter fence sensors, access sensors, voice and other applications on smartphones for remote monitoring.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the plant and between the plant and Head Office would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
