

## How reliable is your provider?

Your customers rely on you to provide them with quality Internet or data connectivity 24 hours a day, 7 days a week. In short, you need a provider for your upstream connectivity who delivers a reliable service day in, day out, delivers the bandwidth you contracted to receive and who is there to support you 24/7.

We understand the ISP business inside out, having had the experience of building our own network infrastructure and delivering a quality of service we are proud of, which is why we are confident to support ISPs with a full range of services.

Online understands the need for reliable connectivity for Internet Service Providers and we offer a comprehensive and fully flexible range of enterprise quality communications services.

## VSAT Solutions

Whether you use satellite Internet for your principal upstream connectivity or you are looking for a cost effective solution to provide backup to your fibre connection, we will support your business. In addition to upstream connectivity, we can support you with a competitive solution to provide VSAT to those customers, big or small, outside of the reach of your ISP network.

We believe in being closer to our customers to deliver quality services and to provide customer service and support beyond others. We work closely with ISPs who have experience on the ground and who we can support to provide a range of services that you may not have access to now. We are always keen to establish new partnerships with reliable and dependable ISPs.

Onlime offers a wide range of Internet and data services and we will work with you to develop proposals to select the most cost effective solution for your customers' requirements, whether it is a small fixed iDirect® system or an SCPC installation for larger entities requiring higher data speeds. The VSAT can connect back to our teleport in Germany and then out to the Internet. If your customers are part of a larger group we can connect them directly to their corporate network anywhere in the world through dedicated circuits or MPLS out of our Teleport or one of our other European POPs in London, Frankfurt and Amsterdam for both voice and data.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

## Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide Internet access or

dedicated MPLS connectivity through our European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cable and can work with you to develop a fibre solution. Even if your building or site is not directly connected to the fibre network we can install wireless links to bridge the gap.

## Wireless

We supply, install and operate long and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments and we can support you with equipment selection, network design and all of the necessary monitoring software.

## Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre.

Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls on the same PBX would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

## Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
