

And now for the action!

We know what really counts is that your communications work when the heat is on. Of course they need to work when you practice and even in the barracks so we deliver reliable and secure communications 24 hours a day, 7 days a week.

We have supported Government operations since the Teleport was commissioned in 1987 and continue to do so today. We support small mobile teams in challenging territories and larger camps in what are now more stable locations. The Onlime team has a number of ex-military staff who have the field experience and understand the environment.

Onlime delivers a comprehensive and fully flexible range of quality communications services.

Global reach and dependability of communications, even in the most remote areas, is mission critical for military organisations where lives are at risk and data is extremely sensitive. Onlime (previously CET Teleport) has been ensuring stable and secure voice and data satellite services for military organisations around the world for many years.

VSAT Solutions

Whether it is large SCPC point-to-point links for welfare Internet to camps in remote locations, smaller encrypted dedicated links for operational support or iDirect® based mobile antennas for compact independent teams, which can be rapidly deployed and easily relocated, Onlime is on hand to deliver.

The VSAT links connect back to our teleport in Germany and then over the Internet or securely over dedicated private circuits to the final destination.

Onlime delivers MPLS end-to-end over the satellite links, whether iDirect or SCPC, to ensure a high quality service.

Satellite bandwidth is a scarce commodity and for camp environments both TCP Acceleration and Caching of regularly used content are excellent ways to save resources.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide Internet access or dedicated MPLS connectivity to your offices through its European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cable and can work

with you to develop a fibre solution. Even if your site is not directly connected to the fibre we can install secure wireless links to bridge the gap.

Wireless

In addition to the long-range wireless links, we install and operate shorter-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments. Ideal for cross site links at military camp sites to connect the main administration buildings with living quarters, security posts, equipment workshops, production areas, etc. The wireless network can support everything from security cameras, perimeter fence sensors, access sensors, voice and other applications on smartphones, and all of the welfare connectivity.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre.

Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the camp would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
