

Are your communications services all at sea?

Maritime communications are developing fast. Ship owners, crew and passengers alike now demand full time access to a host of applications including weather information and ship management data to voice and Internet, no matter where the vessels are in the world.

We provide the full range of services from always-on stabilised broadband VSAT systems to satellite phones, on-board Wi-Fi networks and smartphone apps for voice calls or GSM roaming.

Our focus on coverage, reliability and speed will ensure that these links are maintained whatever the conditions.

VSAT Solutions

At Onlime, we can offer both C-band and Ku-band services with stabilised antennas and based on your sailing profiles will recommend the most appropriate solution for your vessels. The VSAT will connect back to our teleport in Germany and then over the Internet to your corporate network, or we can provide secure dedicated circuits to your corporate network out of the Teleport or one of our other European POPs. Onlime delivers MPLS from end-to-end over the satellite links, whether iDirect® or SCPC, to ensure high quality of service.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide just Internet access or dedicated MPLS connectivity to your offices through its European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cables and can work with you to develop a fibre solution.

Wireless

We supply, install and operate short-range 802.11n and Wi-Fi networks on-board ships or vessels. The wireless network can support everything from security cameras, access sensors, voice and other applications on smartphones, and all of the welfare connectivity.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site

solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the vessel and to Head Office would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
