

Where are the communications?

You decide to open a new store, you lease the premises, award the contract for the build out, the stock is in place, staff trained, but no sign of the fibre communications, or worse, the pre-Christmas rush is in full swing and a contractor digs up the nearby road and with it your communications lifeline.

Online has the solution; the rapid deployment of a temporary or permanent satellite link will put you online or back online within a few hours. We offer a comprehensive and fully flexible range of enterprise quality communications services for the retail industry.

VSAT Solutions

Satellite technology can deliver a communications infrastructure to areas where terrestrial alternatives are unavailable, unreliable or simply too expensive. Onlime's satellite service enables retail transactions to be reliably made regardless of location, providing scalability and profitability, whilst maintaining low operating expenses. The modularity of Onlime services allows for quick time-to-market and fast upgrades. VSAT remotes can be deployed rapidly and new remote locations are easily added to a network where limited terrestrial infrastructure exists simply by having ground equipment installed and configuring bandwidth to the site. The satellite antennas are small, easily hidden and don't require planning permission.

Whether you are a small independent retailer or part of a large chain, the retail industry has become totally dependent on quality Internet to handle credit card and banking transactions, to communicate with suppliers and to improve its market presence on the World Wide Web.

The VSAT will connect back to our teleport in Germany and then out to the Internet. If you need access to a centralised accounting system or you are part of a larger group, we can connect you directly over dedicated and secure circuits to your corporate network out of one of our other European POPs for both voice and data. Onlime delivers MPLS end-to-end over the satellite links, whether iDirect® or SCPC, to ensure a high quality of service.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide Internet access or dedicated MPLS connectivity or Managed DSL to your stores and offices through its European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cables and can work with you to develop a fibre solution.

Wireless

We install and operate long and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments. The wireless network can support everything from security cameras, perimeter fence sensors for parking, access sensors, voice and other applications on smartphones.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre.

Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the company would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
