

## Are your communications growing as they should?

Invariably based in rural and remote areas, plantations, ranches, farms and agro-industrial facilities often struggle to establish and maintain consistent communications not only with the outside world but internally too. Whether to talk to customers, suppliers, transportation companies, or in a corporate structure with your Head Office, Onlime can provide reliable satellite and terrestrial communications 24 hours a day. We understand your critical need for reliable connectivity. We monitor, control and support 24 hours a day and Onlime offers a comprehensive and fully flexible range of enterprise quality communications services for the agricultural sector.

## VSAT Solutions

Usually located in areas of low population and lacking in national communications infrastructure, particularly in the early days of set up and production, VSAT becomes the only practical communications option for agricultural businesses. Onlime can provide solutions and a variety of options for all phases of agricultural development, whether it is small iDirect® based fixed systems which can be rapidly deployed and easily relocated, or SCPC installations required for the larger facilities. We support the full range of agricultural projects, from the palm oil plantation and bio-fuel projects to the rice grower.

The VSAT will connect back to our teleport in Germany and then out to the Internet. If you are part of a corporate network we can provide dedicated circuits out of the Teleport or one of our other European POPs.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

## Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide Internet access or dedicated MPLS connectivity to your offices through its European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cables and can work with you to develop a fibre solution. Even if your building or site is not directly connected to the fibre we can install wireless links to bridge the gap.

## Wireless

We install and operate both long and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments. Ideal for cross site links in large plantations to connect the main administration

buildings with staff quarters, security posts, equipment workshops, production areas, etc. The wireless network can support everything from security cameras, perimeter fence sensors, access sensors, voice and other applications on smartphones, and all of the welfare connectivity.

## Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre.

Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the plantation or ranch and with Head Office would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

## Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
