

# Teleport Operators **onlime** Business Communications

**Our teleport services are only a phone call away!**

The Onlime Teleport was built by Deutsche Telekom in 1987 and is one of the largest in Europe. Named first as the Central European Teleport then shortened to CET Teleport in 2008, it is the technical hub of the Onlime Group. The Teleport is home to more than 50 satellite antennas from 15m diameter downwards, sitting on 160 acres of land. Since 2009 it has undergone a major program of upgrade and refurbishment in every area of operation. The facility is now state-of-the-art and is delivering quality services across the globe, with line of sight to over 200 satellites between 76.5 degrees east and 55 degrees west, covering almost entirely the earth's landmass.

When the Teleport was constructed it coincided with the build out of the German national fibre optic network and as a result the Teleport sits on the main north-south and east-west fibre optic backbone for the country. Since 2008, further redundant fibre links have been added to the Teleport including to BT Tower in London, a major hub for European broadcasters and to colocation and data centres in London, Frankfurt and Amsterdam.

Access to such extensive fibre networks enables the delivery of high quality MPLS services and managed DSL/Internet networks globally.

## Teleport Solutions

The Teleport houses extensive data equipment rooms and hosts a variety of customer equipment from full satellite gateways through iDirect® hubs to single modems, routers, servers and switches. The teleport is ideally situated to expand in this area of the business.

The Teleport also provides web and mail hosting for customers all of which are under strict SLAs backed by our 24/7 NOC.

We can offer Teleport redundancy and will lease any of our available antennas on a long or short-term basis.

We are continually adding to our range of antennas for both C-Band and Ku-Band, and almost all of the existing antennas have undergone a major program of refurbishment.

Onlime is also open to working with teleport operators to uplink bandwidth for specific projects or to provide independent monitoring services.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

## Partnerships

As an independent Teleport Operator we are keen to develop partnerships with other teleports around the world to expand our footprint and we believe our strengths and the facilities at our Teleport are well suited to provide partner teleport operators with reciprocal quality services.

## 24/7 Network Operations Centre

The Teleport is home to an ultra-modern multilingual and multinational 24/7 Network Operations Centre (NOC). The NOC is responsible for managing and monitoring every aspect of the Teleport operations, and plays a vital and proactive role in making sure that our customers receive the highest level of technical support. We monitor our customer's services around the clock and communicate promptly to resolve any issues.

## Project Management

A key part of the Onlime commitment is to ensure that we deliver what we promise. We have a dedicated Project Management team based in Hameln and in our UK offices whose responsibility it is to make sure deadlines are met, budgets are adhered to and we deliver the highest quality of service expected of us.

## Fibre solutions

With access to extensive fibre connectivity at the Teleport, Onlime can provide Internet access or dedicated MPLS connectivity through our European POPs. Onlime has access to a wide variety of submarine and terrestrial fibre cable and can work with you to develop a fibre solution.
