

Who ad-ministers your communications services?

Over many years Onlime has been providing a wide range of services to Government Ministries or Departments over satellite and fibre. Whether for just Internet or for secure networks linking the police or national security agencies, revenue authorities, or a network of remote data connections linking embassies overseas,

Onlime can provide it all.

Our own infrastructure, built to German Government standards, is fully redundant secure and controlled through strict protocols for access by authorized personnel.

Onlime offers a comprehensive and fully flexible range of secure quality communication services for Governments worldwide.

Fibre solutions

With the exciting activation of the ACE submarine cable in Sierra Leone, Onlime is now delivering faster, more reliable Internet than ever before. As a customer in Freetown you will have hopefully already noticed the difference as our entire network is fed from the fibre cable.

VSAT Solutions

Onlime currently supplies VSAT solutions to remote military camps, mobile teams with flyaway antennas in challenging environments, Government Ministries and embassies, as well as border control points in a variety of locations. We can supply you with immediate, secure, cost effective and reliable satellite communications to ensure you can communicate with the outside world from day one. VSAT often becomes the only practical option and Onlime can provide solutions for all aspects of Government communications.

We can deliver, install and support small iDirect® based mobile antennas for military, police or border patrol units or small fixed systems at border crossings or remote Government offices, or larger SCPC installations for main Government buildings to ensure backup to the national infrastructure.

The VSAT can connect directly back to your own in-country network or through our Teleport in Germany and then over secure dedicated circuits to your Government network out of the Teleport or from one of our other European POPs.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Wireless

We supply, install and operate long-range and short-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments, and we have deployed numerous installations in some of the harshest environments. The wireless network can support everything from security cameras, perimeter fence sensors, access sensors, voice and other applications on smartphones, and all of the welfare connectivity.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Calls within the Government offices would be free of charge and national and international calls are charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
