

Aid where it counts

NGOs and their staff must be some of the most resilient on earth. Living and working in almost all of the world's most challenging locations with limited resources, the one resource they can't do without is communications.

With our extensive experience in Africa and in conflict and post-conflict countries such as Afghanistan, we fully understand the needs of the NGO community and have been providing communications services in that field for a number of years.

Online offers a comprehensive and fully flexible range of cost effective enterprise quality communications services for the NGO community.

Onlime is pleased to support a number of multinational aid agencies with communications as well as smaller agencies with one or two members of staff in truly remote locations. We support school projects, hospital projects, sports associations and many others, recognising the importance of communications not only to drive the projects but also for staff security.

VSAT Solutions

Whether you are multinational aid agency with operations in many countries or an NGO with a single location, Onlime can provide you with cost effective communications to keep you connected with the rest of the world.

For those living and working in areas of poor infrastructure or in the more rural and remote areas of the world, accessing communication services can be very challenging and the lack of access risks worsening the digital divide in the communities you seek to assist. If electrical power is a problem, as it often is, we can provide a solar solution.

For multinational agencies with operations spread over several locations or countries we can create a pool of bandwidth to be shared across all the sites. Properly implemented this can be very cost effective.

At Onlime our solutions feature the latest modem technology. We provide an end-to-end fully Managed Service, which includes 24/7 monitoring, monthly reporting and Service Level Agreements guaranteeing the highest level of availability.

Fibre solutions

With the exciting activation of the ACE submarine cable in Sierra Leone, Onlime is now delivering faster, more reliable Internet than ever before. As a customer in Freetown you will have hopefully already noticed the difference as our entire network is fed from the fibre cable.

Wireless

In addition to the long-range wireless links, we install and operate shorter-range 802.11n, Wi-Max and Wi-Fi networks for operations in urban and rural environments. A single Wi-Fi access point in a remote location can ensure constant communications.

Voice Solutions

Onlime's Enterprise Voice service ensures cost effective business quality communications over satellite or fibre. Onlime delivers the complete package, from a single phone at a remote location to a centralised multi-site solution for voice, video conferencing and IM capability and even smart phone apps for users on the go. Our system can be built with a single PBX connecting Head Office and multiple sites, which means that all calls made on the same PBX would be free of charge and national and other international calls would be charged at competitive rates. We can provide a system for you to manage and control or have it all managed for you through our European multilingual 24/7 NOC.

Network Services

The Onlime team will be happy to work with you at the early stages of your deployment to make sure we offer you the most effective solution for your requirements. We can assist with design, security, implementation and ongoing network management.
